Lungthy Agent

Multi-Agent System for Smoking Cessation Assistant

A multi-agent system that provides comprehensive support from financial, health, and psychological perspectives to help people who want to quit smoking.

System Architecture Overview

Hierarchical Multi-Agent Architecture

- Master Router Layer (Query analysis & agent selection)
- Specialist Agents Layer (Domain-specific AI Agents)
- Orchestration Layer (Sequential or Parallel execution)

What Does Master Router Do?

- Receives user input (question or statement)
- Analyzes the intent and context
- Classifies the query type
- Determines which specialist Agent(s) to activate
- Routes the request with full context
- Manages response synthesis

Specialized Agents

ကိုချစ်တီး (Ko Chit Tee) - Financial Agent

ဒေါက်တာရမ်းကု မပု's ယောက်ျား (Dr. Yan Ku) - Medical Agent

ARI - Empathy Counselor Agent

Orchestration Layer

- Sequential for Craving Buster
- Parallel for Motivation Dashboard
- Final Output in Myanmar Language

Tools Used

AI & Frameworks

- Google ADK (Agent Development Kit)
- Gemini API
- Multi-Agent Architecture

Workflow Technologies

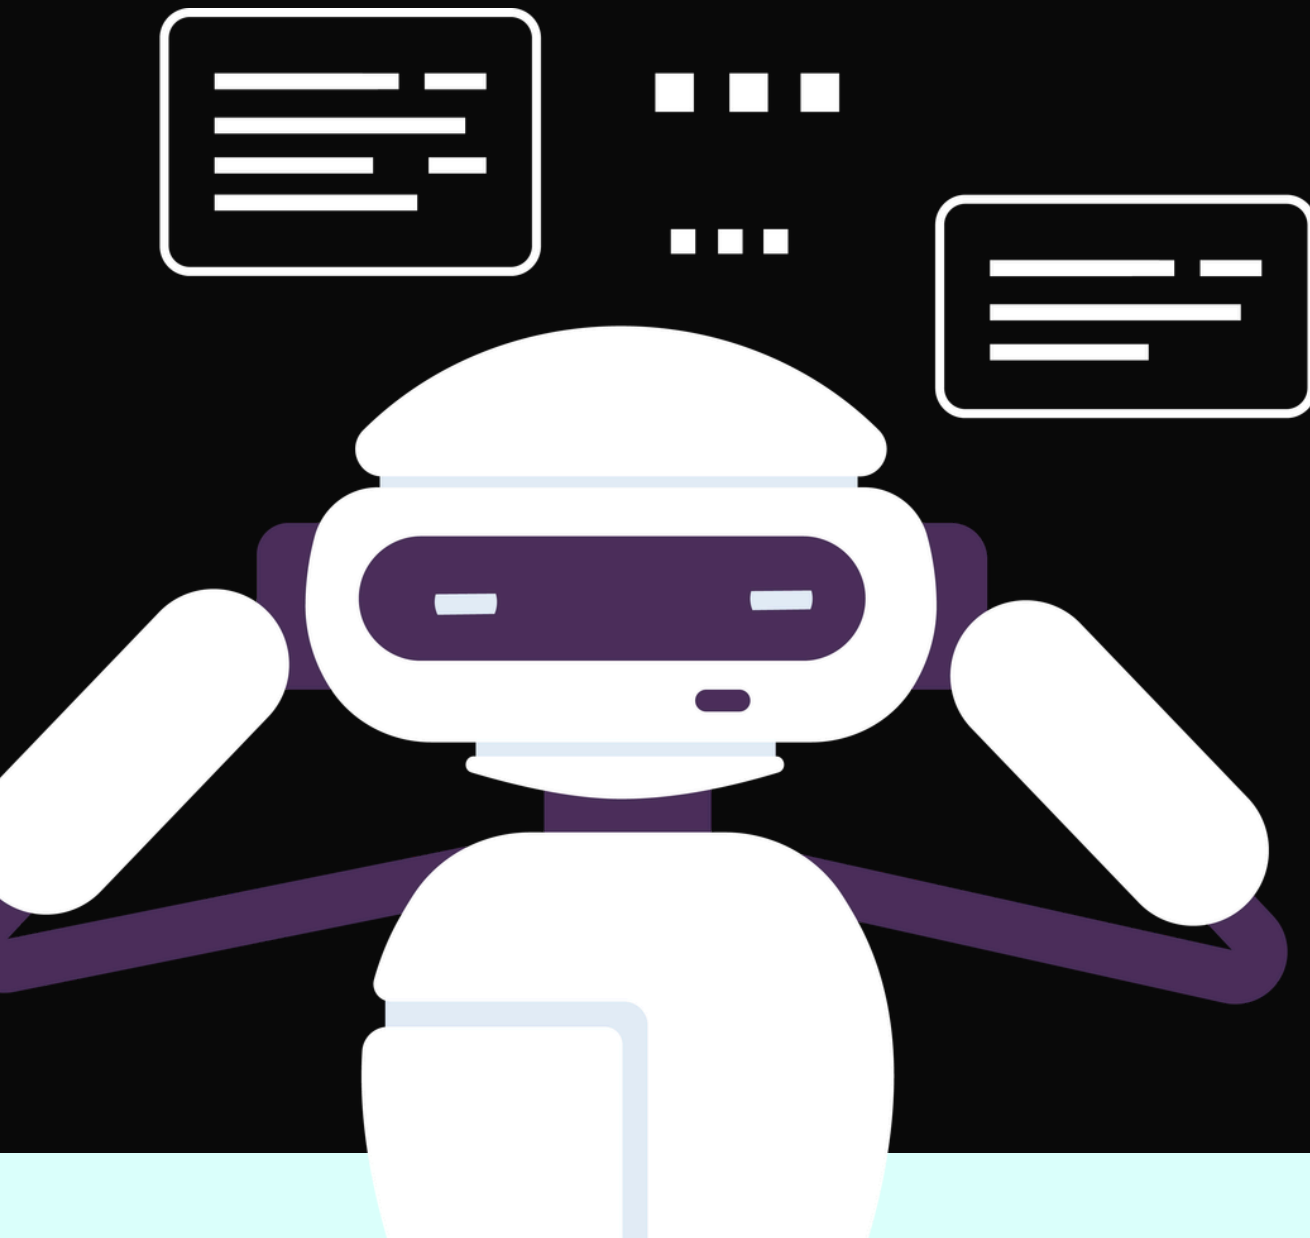

- Routing Pattern
- Sequential Workflow
- Parallel Workflow

Memory & State Management

- Session Management
- Stateful Memory

External Tool Integration

- Google Search Tool

Thankyou
